Atomos Firmware Upgrade

Shogun Flame 7.22 release notes

FID: 060907110207

Features:

✅ **Added High Frame rate CDNG recording for frame 2K 50/60/100/120p for Sony FS5/FS7/FS700**

Bug Fixes:
• Fixed rare issue when switching between playback and recording modes with all CODECS.
 • Occasional incorrect on screen LUT corrected
 • Corrected incorrect V-Log HDR mode in some camera combinations
 • Fixed rolling timecode trigger setting not restored after reboot
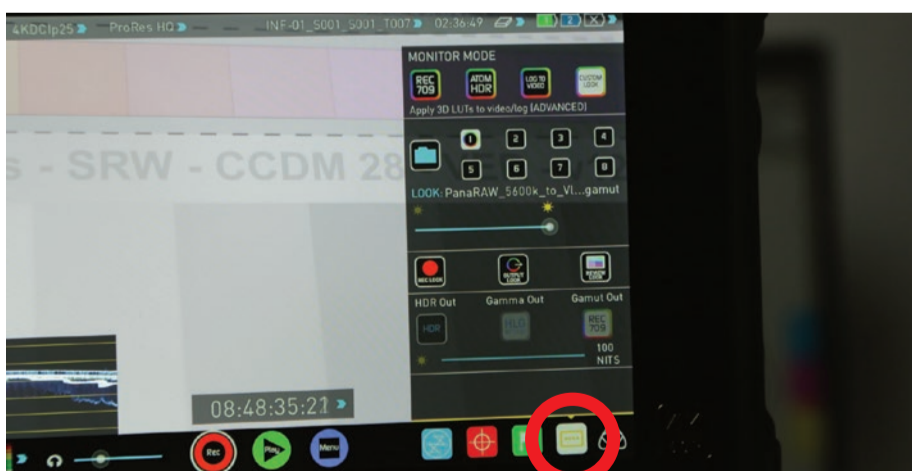

Known issues:
• Panasonic Raw to ProRes
    • Atomos maintain the native Pana Raw LUT and do not convert to V-Log on the unit currently.
    • To record V-Log the same as the camera does internally please apply the 3D LUT found here:
    http://firmware.atomos.com/panaRAW_to_Vlog_Vgamut_LUTs.zip

To load the 3D LUT:
• Download LUT onto Atomos approved Disk
• Insert into Shogun
• Go to Monitor Icon pressing Custom Look button

• Press Folder icon
• Press empty slot (1 to 8)
• Select Pana Raw to Vlog LUT on disk
• Apply LUT
• To burn in for V-Log recording press REC LUT Button.
WARNING: This will not be reversed in post.
Do not burn in the LUT if full Post flexibility desired.
