

Atomos Firmware Upgrade

Shogun Studio 6.6 release notes

FID: 060806000207

Features:

- Now supporting HDR exposure from the following camera log curves:
Sony, Canon, Arri, Panasonic, JVC and RED cameras.
- Colour gamut mapping precision increased.
- Up to 10,000 nit PQ monitoring and grading input added.
- Playout to HDR monitors and televisions using PQ added.
- Increased precision in blacks when processing HDR from log inputs giving better black representation.
- Use AtomHDR easier with a new visually improved slider.
- Set the dynamic range of your scene with ease using the simplified HDR waveform line while in AtomHDR mode.
- Automatically set the scene's max brightness with the new WFM Auto button.
- Take advantage and use the full height of the WFM to view the HDR range by using the WFM HDR button.
- A more precise WFM with graticule values that adjust depending on the log source.
- Change the way you play back clips with the new slow motion feature for easy fast forwarding and reserving. While video is paused, a slow motion slider will appear above the playback controls.

Bug Fixes:

- Fixed an issue where some files exported from NLE's did not play audio.
- Fixed an issue where waveform monitor graticules were not visible with some menus on the screen.
- Fixed an issue where monitor would sometimes appear jerky when panning at HD 60p.
- Improved RS422 controller compatibility.
- Fixed an issue where the unit would sometimes not power up or shut down completely.

Previous Shogun Studio 6.5 release notes:

- Initial release.
