

Release Notes

AtomOS 10.55

NINJA V

Important Note:

With the installation of this update if not previously activated users will be required to activate ProRes® RAW, as a codec. Following the Firmware update, when a RAW source is plugged in, or a user selects ProRes RAW Codec, a UI pop-up will ask for activation code to continue.

Visit Atomos website www.atomos.com/activation and follow the online instructions to generate a code.

Fixes

- Enabled Loop-out of V-Log RAW in Playback mode for Panasonic LUMIX S5.

Enhancements

- ISO metadata reported by FCP X 10.4.9 from Sony Alpha A7SIII (ILCE-7SM3).
Also needs camera firmware update v1.02.
- ISO metadata reported by FCP X 10.4.9 from Sigma fp. Also needs camera firmware update v2.02.
- N-Log monitoring pipeline for Native / LUT monitor modes, with Nikon RAW function added.
- N-Log RAW Loop-out HDMI.

Known limitations

- RAW to HDR HDMI output - PQ / HDR10 output conversion may appear slightly darker by 1-2 stops.
